

Game Grid

Implement a ReactJS casino grid app

Requirements

- Use React with JS or TS
- The app should have two views
 - **Grid View** – shows a list of games with title and thumbnail in a grid layout. First game in the collection should be shown as big one. Upon clicking on any of the items, the “Active Item View” is shown.

- **Active Item View** – shows thumbnail, title and description of the game. A “playbox” is shown in the center, which will only include a loading animation (game loading simulation)

- Design – design and color is by choice. Colors in the screenshot are just an example
- Data – please use the following as mock data to fill the grid -
<https://drive.google.com/file/d/1DUDNuGoBX1soI0jHg2HCUnyeN0JKsaRs>
- CSS libraries are allowed
